

# Gecode

an open constraint solving library

Christian Schulte

KTH – Royal Institute of Technology, Sweden

# Gecode

---

- ▶ **Generic Constraint Development Environment**
  - ▶ open source
  - ▶ C++ library
  - ▶ constraint propagation + complete (parallel) search
  - ▶ finite domain and finite set constraints
  - ▶ complete documentation (reference, tutorial, papers)
  - ▶ thousands of users

# Overview

---

- ▶ History and facts
- ▶ Modeling (interfacing) & programming
- ▶ Openness

# History

---

- ▶ 2002

- ▶ development started

- ▶ 1.0.0

- ▶ Dec 6, 2005

- ▶ 2.0.0

- ▶ Nov 14, 2007

- ▶ 3.0.0

- ▶ Mar 13, 2009

- ▶ 3.5.0 (current)

- ▶ Feb 1, 2011

- ▶ ... 4.0.0 in 2012

24 releases

43 kloc, 21 klod

77 kloc, 41 klod

81 kloc, 41 klod

126 kloc, 52 klod

Modeling with Gecode (98 pages), 41 klod

- ▶ 3.5.0 (current)

- ▶ Feb 1, 2011

Modeling & Programming with Gecode (448 pages)

- ▶ ... 4.0.0 in 2012

# People

---

## ▶ Core team

- ▶ Christian Schulte                      KTH – Royal Institute of Technology, Sweden
- ▶ Guido Tack                              K.U. Leuven, Belgium
- ▶ Mikael Z. Lagerkvist                  KTH – Royal Institute of Technology, Sweden

## ▶ Code

- ▶ contributions: David Rijsman, Denys Duchier, Filip Konvicka, Gabor Szokoli, Gregory Crosswhite, Håkan Kjellerstrand, Patrick Pekczynski, Raphael Reischuk, Tias Guns.
- ▶ fixes: Alexander Samoilov, David Rijsman, Geoffrey Chu, Grégoire Dooms, Gustavo Gutierrez, Olof Sivertsson.

## ▶ Documentation

- ▶ Seyed Hosein Attarzadeh Niaki, Vincent Barichard, Felix Brandt, Markus Böhm, Roberto Castañeda, Gregory Crosswhite, Pierre Flener, Gustavo Gutierrez, Gabriel Hjort Blindell, Sverker Janson, Andreas Karlsson, Håkan Kjellerstrand, Chris Mears, Flutra Osmani, Dan Scott, Kish Shen.

# Goals

---

## ▶ Research

- ▶ architecture of constraint programming systems
- ▶ propagation algorithms, search, modeling languages, ...

## ▶ Efficiency

- ▶ competitive (winner MiniZinc challenges 2008-2010, all categories)
- ▶ proving architecture right

## ▶ Education

- ▶ state-of-the-art, free platform for teaching

# Users

---

## ▶ Research

- ▶ own papers
- ▶ papers by others: experiments and comparison
- ▶ Google scholar: some 500 references to Gecode

## ▶ Education: teaching

- ▶ KTH, Uppsala U, U Freiburg, UC Louvain, Saarland U, American U Cairo, U Waterloo, U Javeriana-Cali, ...

## ▶ Industry

- ▶ several companies have integrated Gecode into products (part of hybrid solvers)

# Deployment & Distribution

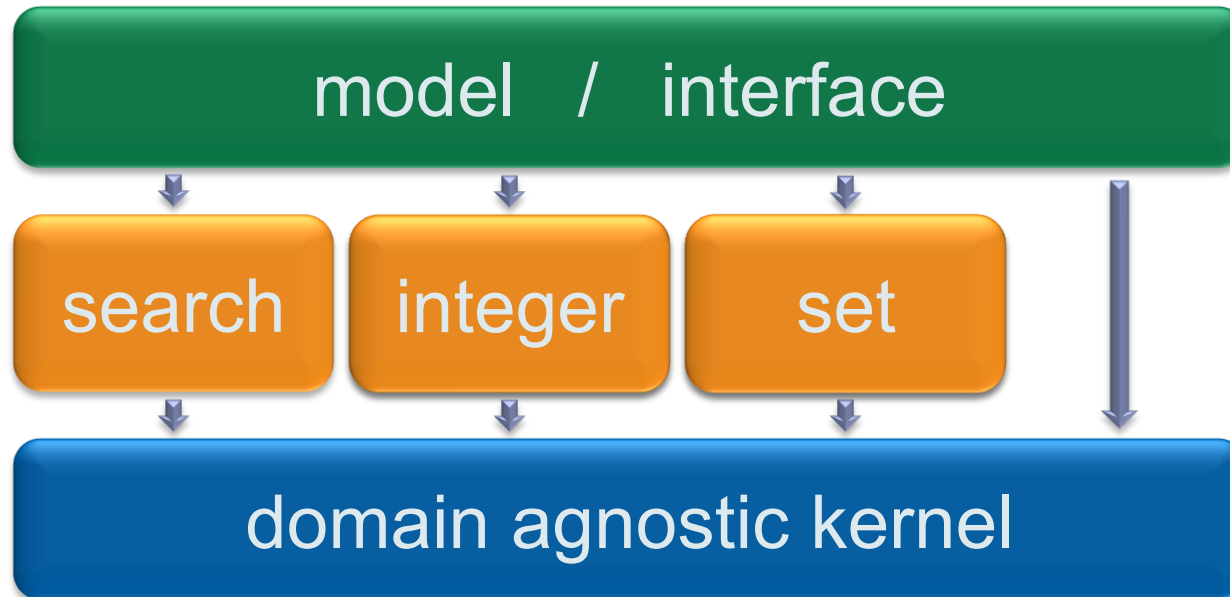

---

- ▶ Open source ≠ Linux only
  - ▶ Gecode is native citizen of: Linux, Mac, Windows
- ▶ High-quality
  - ▶ extensive test infrastructure (around 16% of code base)
- ▶ Downloads from Gecode webpage
  - ▶ software: between 25 to 125 per day
  - ▶ documentation: between 50 to 300 per day
- ▶ Included in
  - ▶ Debian, Ubuntu, FreeBSD

# Modeling & Programming

# Architecture

---

# Architecture

---

- ▶ propagation loop
- ▶ backtracking for search
- ▶ memory management

# Architecture

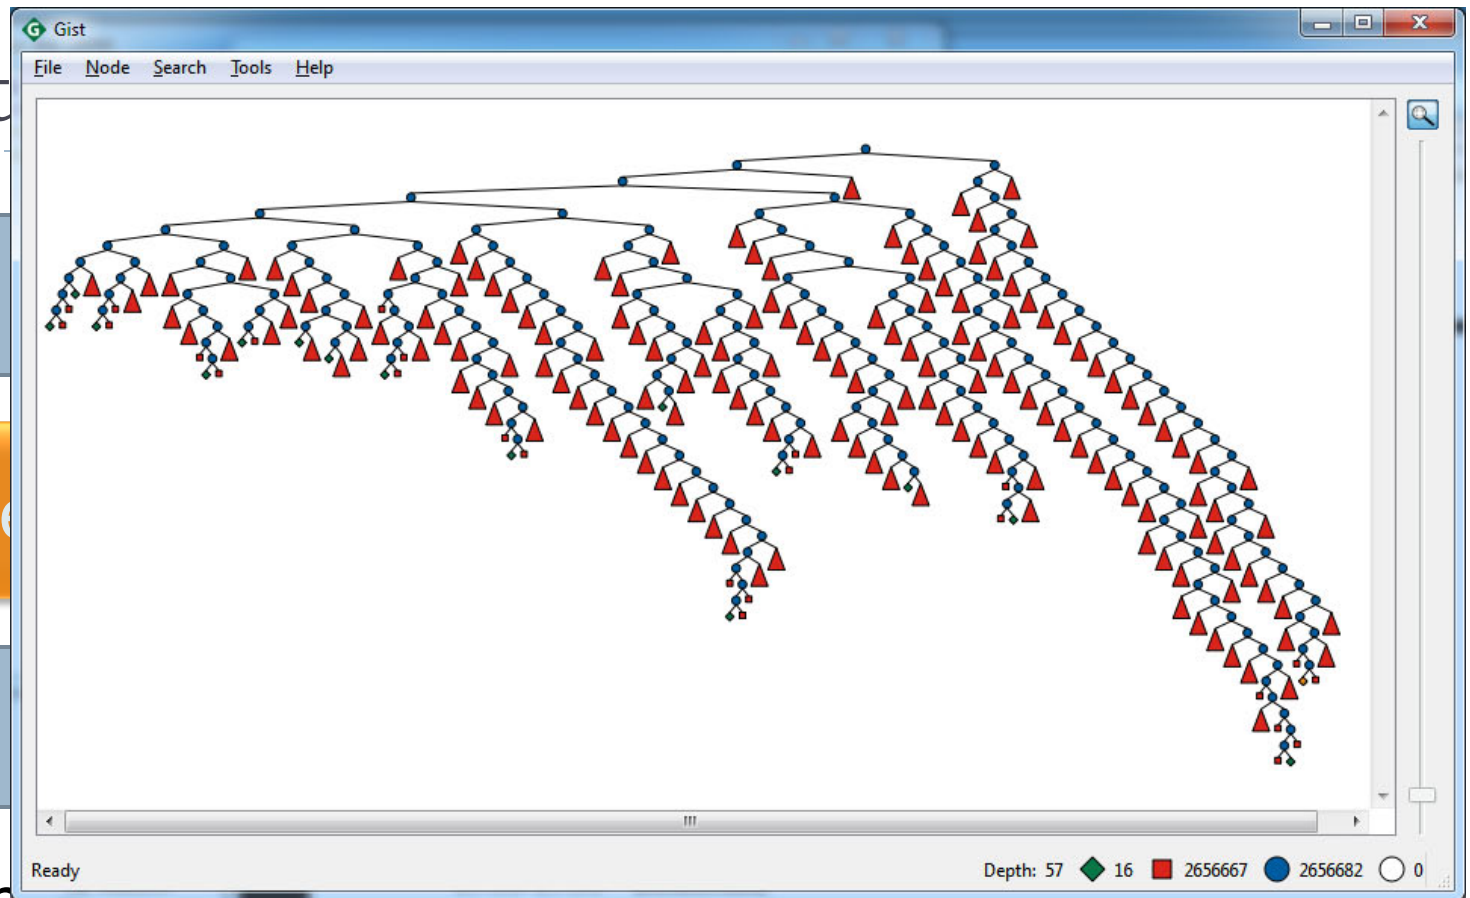

---

## ▶ search engines

- ▶ depth-first (DFS) and branch-and-bound (BAB)
- ▶ parallel search

# Archit

## ▶ search engines

- ▶ depth-first (DFS) and branch-and-bound (BAB)
- ▶ parallel search

## ▶ search tool: Gist (millions of nodes)

# Architecture

---

- ▶ variables
- ▶ propagators (constraints)
- ▶ branchers (search heuristics)

# Architecture

---

- ▶ direct C++ modeling or interfacing
- ▶ language interfaces: MiniZinc (see Guido's talk later), Java, JavaScript, Lisp, Ruby, Eclipse Prolog, ...

# Modeling (interfacing)

---

- ▶ **Use modeling layer in C++**
  - ▶ matrices, operators for arithmetical and logical expressions, ...
- ▶ **Use predefined**
  - ▶ constraints
  - ▶ search heuristics and engines
- ▶ **Documentation**
  - ▶ getting started 30 pages
  - ▶ concepts and functionality 96 pages
  - ▶ case studies 76 pages

# Modeling (interfacing)

---

## ▶ Constraint families

- ▶ arithmetics, Boolean, ordering, ....
- ▶ alldifferent, count (global cardinality, ...), element, scheduling, table and regular, sorted, sequence, circuit, channel, bin-packing, lex, geometrical packing

## ▶ Families

- ▶ different variants
- ▶ different propagation strength

# Programming

---

## ▶ Interfaces for programming

- ▶ propagators (for constraints)
- ▶ branchers (for search heuristics)
- ▶ variables
- ▶ search engines

▶ Documentation	intro	advanced
▶ propagators	40 pages	58 pages
▶ branchers	22 pages	
▶ variables		44 pages
▶ search engines	12 pages	26 pages

# Openness

# Open Source

---

## ▶ MIT license

- ▶ permits commercial, closed-source use
- ▶ disclaims all liabilities (as far as possible)

## ▶ License motivation

- ▶ public funding
- ▶ focus on research

## ▶ Not a reason

- ▶ attitude, politics, dogmatism

# Open Architecture

---

- ▶ More than a license
  - ▶ **license** restricts what users **may do**
  - ▶ **code and documentation** restrict what users **can do**
- ▶ Modular, structured, documented, readable
  - ▶ complete tutorial and reference documentation
  - ▶ ideas based on scientific publications
- ▶ Equal rights: clients are first-class citizens
  - ▶ you can do what we can do: APIs
  - ▶ you can know what we know: documentation
  - ▶ on every level of abstraction

# Open Development

---

- ▶ **We encourage contributions**
  - ▶ direct, small contributions
    - we take over maintenance and distribution
  - ▶ larger modules on top of Gecode
    - you maintain the code, we distribute it
  
- ▶ **Prerequisites**
  - ▶ MIT license
  - ▶ compiles and runs on platforms we support

# Summary

---

- ▶ Open source libraries require open architecture
  - ▶ users need good code to build on
- ▶ Open architecture promotes equality
  - ▶ client code is first-class citizen
  - ▶ encourages code contributions
- ▶ Open development fosters research
  - ▶ collaboration
  - ▶ experiments are reproducible
