Fråga 20: General comments? (5 personer)

Kommentarer
- Too small classroom 439, 440 was better. Lecture notes had too much text, better with more examples. Cant apply the course to the real industry. The guest lecture was too hard to understand, because he used too many industryterms that we couldn't understand which made it less interesting. Very good homepage, easy too find material. Good mail contact. Assignments was good but excercises didnt help much, because the assignments were more difficult.
- To add the KTH allowed language Swedish as an alternative to answer with at the exam.
- Too small room for lectures. Monotone lecture notes, they all look the same. Should include more examples and a little less theory.
- I feel that it's extremely disturbing that there are old exams without answers on the website and even worse there are lots of wrong answers for those exams with solutions!!!

  I noticed, already at the first lecture, that you really like this subject, you are very enthusiastic but it doesn't always seems like you are perfectly prepared before the lectures and you appear to be quite nervous when you speek in front of the class.

  The assignments were very good, they started up pretty easy and the last one were a lot more difficult. They also seem to sum up the important bits of the old exams - just hope the exam tomorrow will be like dem too... =D

  I think this course would fit even better right after the course Datalogi II ++.
- The exam solutions posted on the website contained a lot of errors and most exams lacked suggested solutions altogether. Not good.

  This semesters exam was more or less a copy of the previous one. I would usually say that its good to know what the exam will look like, but when you more or less can pass the course by simply memorizing some of the answers from previous exams I think its too much. The exam was well-designed in that it reflected the course, but the questions could have been more imaginative.

  My low grading of the courses meaningfulness is due to the fact that I dont plan on developing any compilers in the future and that I dont really see how knowledge of the inner workings of a compiler helps me debug my Java applications.

  Still, the course was well-planned with skilled teachers and it's always nice with guest lectures (since we then know that there is a high correlation between taught skills and skills used in the industry).
