Fråga 20: Comments? (3 personer)

Kommentarer

- I think that the whole course was very well done, labs were welldefined and they all covered what we where doing. It was probably the best course i have had so far.
Kudos to an interesting and fun course.
- The labs were very confusing from time to time. The reason is because you want us to solve the problem in a way we haven't done before (having especially the sudoku in mind, where we were forced to use binary data and the very confusing skeleton code). I think it's great of you to force us to think in another way, many may evolve a very narrow way to think when solving problems if solving the same way all the time, but I found the labs a bit too "decode-the-instructions-and-figure-out-how-to-apply-it". It felt mostly like trying to understand how you were thinking instead of learning and use what you wanted us to learn. You don't learn to program perfectly by writing every program perfect and professional, by following instructions. You learn by making programs over and over again. Personally i would have preferred weekly labs, which can be strict and contain a confusing skeleton code, and one bigger lab assignment towards the end, concisting of just the problem, not how to solve it.
- I liked the course, and it was easy to follow. Although i had read neither datorteknik or algorithmmer och datastrukturer - so some things were new to me, but the lecturer still made them understandable so I have learned alot in this course.

The labs were so so. lab pms where sometimes hard to follow, but I've heard that it was part of the excersise to learn how to solve a problem. But sometimes it was truely difficult to even understand what was asked for.
