Fråga 20: General comments? (6 personer)

Kommentarer
- The scope of the home assignments felt a bit to narrow. In each home assignment there should be a few more but smaller tasks in order to cover more cases. Beside that I think it's a very interesting course and one of the greatest teachers ;-)
- Last home assignment little too difficult. Mostly because difficult to find information how to complete it.

  Garbage collection part on exam was unexpected but it's valuable to know. Maybe more examples on this would be helpful.
- Your slides could be a bit more "talky".Cut out the discrete math and focus on explaining in clear steps how the algorithms work. I mean, I relay am code (and math) blind, so please! If you did that, it would save us several hours of searching google and wikipedia for explanations of what an algorithm actually does (which we need for solving the home assignments and passing the exam). The book isn't very good at explaining these things either, so we really depend on you at this point.
  Also, the tasks on some of the home assignments are inhumanly large, please split them into smaller ones. That would also give you an opportunity to have them covering more special cases and pitfalls than they do now. For example, we never had to do the "freeze" step of the register allocation algorithm in home assignment three. If you had several smaller tasks instead you could make one of them cover this for example.

  Also, I would like some more focus on how you relay implement a compiler in practice, a little more reflections and maybe a small case study where you go through an overview of the implementation of a certain compiler. That would really help in understanding what all these graphs, tables and algorithms are rellay good for!

  Besides these things, thanks for great course!
- really amazing lecturer!
- Fun course. Tad messy at times, many different things to remember, but 'twas fun nonetheless
- Very interesting and important course. The lectures were outstanding, however the course book could be better. Thank you, Christian!
