Fråga 20: General comments? (8 personer)

Kommentarer
- Would love us to write parts of a compiler. Understand it might be difficult to squeeze it in to the course. The course seemed very difficult at the beginning, but it all came together at the end as things became more and more clear, especially thanks to the home assignments and tutorials.

  To the teacher, thank you for a grate course and in all the motivation and inspiration you gave us during the lectures.
- Awesome and interesting course, awesome lecturer.
- More visual representations and examples to drive home the point.
  Don't just try to reasoning about it by talking - show it! Some people learn better by watching instead of listening!
  Example: abstract algorithms and theorems such as George and Briggs.
- Great teacher, fun and interesting course.
- The lecturer's friendly attitude made the lectures lively and enjoyable and encouraged me to take the course mroe seriously.
- Great course.

  Little detail : some formulas in the slides could be more specific
  (sometimes, the pseudo-code is hard to understand)
- Excellent teachings, extremely motivated to teach!
- What I think is that there are no adequate practice questions to build student's confidence to tackle all the questions no matter how tricky it may be let alone the short time period. My only reference is the past solution manuals, but I do believe there might be different views and concepts to tack all related problems. However I understand the lecture and the course concept but since the course is more of practical application I would suggest more questions as it relates to each topic to get familiar and to build more skill but I think I should have pass the course if all thing being equal.
