Comment: We could have practical labs.. And you could somehow reduce the theory content.. because some things are pretty obvious to learn. For example the cache part. We already learnt it in embedded systems with ingo sander.

- The best course I have attended so far!
- It was very good: the way of teaching, the materials, the lecture of one of your student,...
- I think the course should be expanded over large time period. There are many things to digest within a short span of time

Fråga 8: If you have suggestions for improvement, please give them here. (2 personer)

- Great course over all, and me and my friends who also took the course all loved you as a lecturer.

 That said the material is hard to keep track of during the lectures, perhaps could be altered to give more practical examples (which I guess you do give during excersises)
- Professor is very good at teaching. Nothing is required for improvement in teaching and tutorials methods. The one thing which is required to improve is the timings of lectures. There were back to back 4 hours lectures which sucks the fuel from our body and we were unable to concentrate enough.
