Fråga 20: General comments? (7 personer)

Kommentarer

- Generally, it was very good. The only problem was the fast starting of the course, and facing a lot of information in the first lectures.
Some assignment lectures also could be nice.

Those aside, the rest was excellent!

- The course was interesting and useful to know and the lecturer was really motivated and helpful for answering the questions.
- no comments
- Interesting course and good teacher.
- I really enjoyed this course. Especially, it refreshed my mathematical knowledge that I tend to forget... I also find constraint programming really interesting.
However, I think that repeating what we did at the last lecture at the beginning of each lecture do not need to be as long as this. However, I like how constraint programming is introduced in this course because it is very rigorous and it is a solid basis to learn more about it later.
As a result, I get now interested by algorithmic and graph theory and I look forward to learn more about it.
- I think you really should consider having scheduled laborations. The home laborations were great but sometimes you needed help to understand all aspects and the learning would be more direct when interacting with an assistant directly rather than through email. The lecture notes were good if you had attended the lecture but didnt say much if you didnt. Also, the course notes rocked and did contain almost everything. They were easy to understand and didnt go too much into boring details. Overall it was a great course but I would like to see more scheduled laborations. If possible I would also go into theory before starting with Gecode. I had some problems with understanding Gecode at the beginning of the course but after the theory everything became much clearer.
- Great course!
