Fråga 20: General comments? (6 personer)

Kommentarer

- Excellent teacher and lectures. Great lab assignments. Better lecture notes / course literature would be great though.
- Hard to evaluate as I did not manage to perform well.

Overall the course is great and I believe a (single) textbook would improve it, just as it helped ID2202. Relying too much on lecture slides is painful.

I recommend tutorial sessions, like in ID2202. Please consider an early tutorial on gecode where you code and we watch on the projector. Robert Rönngren did this in a few tutorial sessions in the OS course. It worked out great.

Optional problems in assignments should be made mandatory. Because of my lack of motivation, I did not manage to do all of these (disappointing). However, workload is low enough to make this change work without putting too much stress on students.

Thanks for yet another great course!

- go ninja go ninja go ninja go!
- The course books are not as good as the incomplete written lecture notes, would be great to see a complete version. Recorded lectures or some kind of transcript could provide a good alternative.
- It was one of the best and useful courses I ever had, some issues were unclear for me till last lecture, during study for exam suddenly most things became clear and I found lots of interest. I think using some graphical material like photos and figure in lecture slides can help students to understand better the concepts.
- Very good course in general although a lot of concepts are handled making it sometimes difficult to follow. Maybe the worst part is when you need to learn Gecode which is not easy in the beginning and you need to give it time.
